

WIND SPEED MAP FOR ASCE 7-10

Wind Speed Map and Pole EPAs are based on ANSI/ASCE 7-10. Please check with your local officials to see if your code requirements differ. It is up to you to specify your local code requirements, as it can change from block to block.

NOTES:

1. Values are the fastest-mile speeds at 33 ft. (10 m) above ground for exposure Category 2.
2. Linear interpolation between windspeed contours is acceptable.
3. When using this map to determine EPA readings, always use high end of range.
4. Fixture and pole EPA values are based on wind pressures and forces specified in ANSI/ASCE 7-10.
5. Local code may require wind speeds other than those shown on map.

It is the customer's responsibility to determine the correct wind speed requirement for the location where the pole(s) will be installed. Access Fixtures' poles are guaranteed to meet the wind speed and EPA requirements provided. Access Fixtures is not responsible if a pole has a lower EPA rating than the indicated provided for wind-loading zone where the pole will be located.

CAUTION: This guarantee does not apply if the pole/bracket/ fixture combination is used to support any other items such as flags, pennants, or signs, which would add stress to the pole. Access Fixtures cannot accept responsibility for harm or damage caused in these situations.
